ANNUAL INDEX: VOLUME 56, 1995

Subjects

***Indicates a book review**

Use of the Index

This index is designed to reveal subjects and their interrelations. Thus, an entry, "Absenteeism, drug use, workplace," indicates an item dealing with the interrelationship of the three possibly independent topics, or of any two with the third. And an entry, "Domestic violence, drinking," may reveal how domestic violence is affected by drinking or how drinking affects domestic violence. Items are extensively cross-indexed. For example, a reference to "Dieting, women" would also appear at "Women, dieting."

Terms

Generally, indexing is as specific as possible without posting to broader terms. Many relationships to certain very frequent terms are not indexed under those terms, but appear as main entries throughout the index; scope notes at those terms (e.g., at "Alcohol") are a guide to the index terms used. Preference has been given to direct rather than to inverted entries (e.g., "Prevalence of drug abuse" rather than "Drug abuse/prevalence"). Information not found one way would be sought the other way—or under all possible synonyms. Certain index entries with multiple subdivisions are dealt with by successive main entries, such as "Accidents/fatal," "Accidents/traffic." Similarly, see "Coping/avoidance," "Coping/behavioral," etc., rather than "Avoidance coping," "Behavioral coping," etc.
